Industry Leading Equipment Brands Become One... ... And Strengthen Their Market Position for the Future

During the past decade, **Schneider Engineering AG** moved away from small format machines for the print and paper industry to focus on large machines, robotics and special applications for the manufacturing sector.

This is about to change. **Schneider Engineering AG** is now your one stop partner for paper cutting and handling equipment to process materials for the Print, Paper, Plastic, Offset Plate and Packaging Industries.

To enhance its product range **Schneider Engineering AG**, Switzerland has acquired **Knorr Systeme**, Germany.

The manufacturing legacy of the **Knorr Systeme** product range and the service support will be continued by **Schneider Engineering AG** and will be "Made in Switzerland" now.

Schneider Engineering AG has also reached an agreement with former Key Employees of **Knorr Systeme** to continue the Sales and Service Support of **Knorr Systeme** machines along with **Schneider Engineering AG**. **Knorr Systeme** has a distinguished history dating back to 1960's. **Knorr Systeme** has been designer and machinery manufacturer for peripheral equipment to the Graphics arts industry.

In addition to its own "High End" cutters and robotic machines, **Schneider Engineering AG** will take over responsibility from **Colter & Peterson USA** for the distribution of SABER cutting machines in Europe. Our long-standing American partner, **Colter & Peterson** will continue to distribute and support the entire machine range of **Schneider Engineering AG** and **Knorr Systeme** in the Americas.

Our comprehensive product range now extends from small format machines for printers of any size, to our latest innovations in fully automatic robotic cutting machines with 3 metre cutting width for heavy and difficult to cut materials, high performance ream feeding systems for wrapping and carton lines and so much more.

Give us a call today to see how we can help you!

Yours sincerely,

Willi Schneider
Chairman of the Board of Directors
